Indoor Air Quality Check -Up

Why do you need your indoor air checked?

The EPA has stated that indoor air quality can be 2 to 5 times more polluted than the worst outdoor air.

Indoor Air Quality

90% of our lives spent indoors

2-5x More pollution indoors than outdoors

Common Indoor Air Pollutants

- Airborne particles**
from diesel exhaust, dust, smoke and other sources
- Indoor formaldehyde**
from building materials, furniture, cooking, and smoking
- Household odors & gases**
from activities such as painting, cooking, and smoking
- Ozone**
from outdoor air (ground level ozone is harmful to breathe)
- Carbon Dioxide**
from people exhaling and cooking

Take a minute to answer a few questions:

Does anyone in your home suffer from allergy symptoms?

Do you smell odors in your home? (pet, cooking, smoke or musty smells)

Would you like to reduce dust, pet dander and pollutants in your home?

Would you like to extend the life of your HVAC system?

Have you ever noticed how fresh the air is after a rain storm?

What exactly is our indoor air quality check-Up?

We check your furnace filter to make sure it's the correct size and type.

We check your air ducts, return airs and supply airs for dust and dirt that has built up over the years.

We check for fresh air into tight or stagnant homes.

We check the air flow in your home to make sure your ducts are sealed and insulated properly.

We check for any carbon monoxide leaks.

We check the inside of your furnace blower motor and coil for dust and dirt.

We check your thermostat to make sure it is programmed properly.
